

ABSTRACT OF THE DISCLOSURE

A recreational vehicle foldable deck includes supports adapted for attachment to a structural frame of a recreational vehicle. "L" shaped members are provided. A
5 first end of each of the "L" shaped members is fixedly secured in spaced relation to the platform. A second end of the "L" shaped members is pivotally secured to one of the supports. This enables the platform to be pivotally movable from a substantially vertical stored position parallel to the
10 one side of the recreational vehicle to a substantially horizontal operative position resting at a ground surface.
